Question What is the main focus of Chapter 3 in the Ecology Test A? Chapter 3 primarily focuses on understanding ecosystems, energy flow, and the roles of different organisms within an ecological community. How do producers differ from consumers in an ecosystem? Producers, such as plants and algae, create their own food through photosynthesis, while consumers rely on other organisms for energy and nutrients. What is the significance of the food chain in ecology? The food chain illustrates how energy and nutrients flow from producers to various levels of consumers, showing the interconnectedness of organisms in an ecosystem. Define the term 'niche' in an ecological context. An ecological niche refers to the role and position a species has in its environment, including how it obtains resources and interacts with other species. What are biotic and abiotic factors in an ecosystem? Biotic factors are living components like plants and animals, while abiotic factors are non-living elements such as temperature, water, and soil. Explain the concept of energy pyramids and their importance. Energy pyramids show the decreasing amount of energy at successive trophic levels, highlighting why energy transfer is inefficient and why there are fewer top predators. What role do decomposers play in an ecosystem? Decomposers break down dead organic material, recycling nutrients back into the environment, which supports healthy

ecosystems. How does an invasive species impact an existing ecosystem? Invasive species can disrupt ecological balance by competing with native species for resources, often leading to declines or extinctions of native populations. What is the difference between a habitat and a niche? A habitat is the physical environment where an organism lives, while a niche encompasses the organism's role and interactions within that environment. Why is biodiversity important in an ecological community? Biodiversity enhances ecosystem stability, resilience, and productivity by supporting a variety of functions and interactions among species.
