Fundamental Web Programming Viva Questions and Answers

1. What is Web Programming?

Answer:

Web programming involves creating applications that run on web browsers using client-side and server-side technologies. It includes designing web pages, developing server scripts, handling databases, and ensuring security. Web programming enables dynamic and interactive websites, allowing users to perform various operations such as form submissions, data retrieval, and real-time updates.

2. Explain the difference between HTML, CSS, and JavaScript.

Answer:

- HTML (HyperText Markup Language): It structures the content of a webpage, defining elements like headings, paragraphs, links, images, and forms.
- CSS (Cascading Style Sheets): It styles the HTML content, controlling layout, colors, fonts, and overall visual appearance.
- JavaScript: It adds interactivity and dynamic behavior to a webpage, such as form validation, content updates without reloads, and animations.

3. What are HTML tags? Name some commonly used tags.

Answer:

HTML tags are markup elements used to define the structure and content of a webpage. They are enclosed within angle brackets ``.

Common tags include:

- ``: Defines the HTML document
- ``: Contains metadata and scripts
- ``: Sets the page title
- ``: Contains the main content
- ``

to
: Headings

- ``
: Paragraphs

- ``: Hyperlinks
- ``: Images
- ``: Forms for user input

4. Describe the purpose of CSS in web development.

Answer:

CSS is used to enhance the visual presentation of HTML elements. It allows developers to apply

styles such as colors, fonts, spacing, layout positioning, and responsiveness to ensure a visually appealing and user-friendly website.

5. What is the Document Object Model (DOM)? Why is it important?

JavaScript events are actions or occurrences that happen in the web browser, which scripts can respond to. Examples include:

- `onclick`: When a user clicks on an element
- `onload`: When the page or an element loads
- `onchange`: When the value of an input changes
- `onmouseover`: When the mouse hovers over an element

8. Describe the difference between GET and POST methods in HTTP.

Answer:

- GET: Sends data appended in the URL, suitable for retrieving data. It has size limitations and is less secure.

- POST: Sends data in the request body, suitable for submitting forms and sensitive data. It does not have size limitations and is more secure.

9. What is AJAX? How does it improve web applications?
