Sample Problem and Solution Walkthrough

Problem:

Suppose there are 10 different books, and you want to select 3 to carry on a trip. How many different selections are possible if:

a) The order of selection does not matter?

b) The books are to be arranged in a specific order?

Solution:

a) Number of combinations (selection without regard to order):

Using the combination formula:

$$C(n, k) = n! / (k! (n - k)!)$$

Calculate:

$$C(10, 3) = 10! / (3! 7!) = (10 \times 9 \times 8) / (3 \times 2 \times 1) = 120$$

Answer: 120 different selections.

b) Number of arrangements (permutations):

Since order matters, we use permutation formula:

$$P(n, k) = n! / (n - k)!$$

Calculate:

$$P(10, 3) = 10! / 7! = 10 \times 9 \times 8 = 720$$

Answer: 720 different arrangements.

This illustrates how the solutions clarify the approach and reinforce understanding of fundamental counting principles.

Permutations and Combinations

Sample Problem:

How many ways can 5 books be arranged on a shelf if 2 specific books must be together?

Solution Highlights:

The solution treats the two specified books as a single block, reducing the problem to arranging 4 items (the block plus the remaining 3 books). The steps involve:

- Treating the two books as a combined unit.
- Calculating permutations of these 4 units: $4!$ ways.
- Permuting the two books within the block: $2!$ ways.
- Multiplying to find total arrangements: $4! \times 2! = 24 \times 2 = 48$.

Educational Value:

The solution demonstrates the use of the "block method," a common combinatorial technique, emphasizing the importance of strategic grouping. It also clarifies why permutations within the block are necessary to account for all arrangements.
